

Quotes from Farm Reporters and County Ag Agents

BARRON A.B.: Corn maturity is being pushed by very hot temperatures the last couple of days; this may hurt test weights in the long run. White mold is common in the soybeans. Once again it is difficult to make even haylage, let alone dry hay, with the frequent rains.

RUSK-G.P.: Soybeans are starting to turn, and some corn being taken as green chop to help reduce the feed bill. Not much hay or haylage put up this week. Anticipated fall seedings were not done because of the weather.

MARATHON-K.B.: Good quantity and quality for third crop hay. Soybean leaves are yellowing. Corn is in the late dough to early dent stage. Project corn silage harvest to start next week.

ONEIDA-A.P.L.: Third crop hay quality is excellant. Drying has been a problem with all the rain and heavy dew and high humidity all day. Corn looks great and some will make maturity with no problem. Pastures are in good condition with all the rain. Sweet corn is pretty much done.

OCONTO-K.H.: Some soybean fields starting to turn color.

Finishing up hay harvest and some late straw harvest.

SHAWANO-B.R.: Farmers are starting to chop around the edges of a few corn fields, but most of it is too green yet. We need about two good weeks before corn will be right for silage.

DUNN-S.S.: Most all of our local crops look pretty good. Look for hay to be in short supply by early spring.

TREMPEALEAU-D.D.: Corn is maturing rapidly, with heat units still high. Prime corn silage maturity will pass by in a hurry.

PORTAGE-J.W.: Corn chopping is starting.

WAUPACA-D.H.: Excellent third and fourth crop hay. Some are beginning the fourth crop hay with the favorable weather. Warm weather and adequate moisture is maturing corn and soybean crops. Soybeans are the best looking crop in years.

BROWN-D.S.: Still looking for another rain, but recent heat unit accumulation has helped mature some late-planted acres.

FOND DU LAC-R.P.: Lots of insects in the crops. Soybeans are maturing rapidly. Some seedlings of alfalfa going on, now that we have had rain. Some corn silage is harvested. Corn grain yields will be lower than expected.

GRANT-L.F.: Rain perked up almost everything especially pastures and hayfields. Some nice third and fourth hay crop was made; yields just slightly down. Some soybean fields were over four feet high. Counted 45 pods on one stalk of soybeans and is all filled and starting to turn bottom leaves. Corn looks good and is starting to turn color on ears. Dug some potatoes, pretty good yields. Quite a few people chopping corn for silage. Hay seems green for this time of year.

LAFAYETTE-L.W.: Recent very warm weather is resulting in excellent quantity of fourth crop hay and possibly fifth crop hay for some farmers.

DANE-D.R.: Corn is short because of drought, much is turning color. Corn silage moisture is in the 60s and is ready to be harvested. Most soybean fields are turning color. Yield and quality of fourth-cut alfalfa looks fairly good. Sweet corn crop is done.

GREEN-M.M.: Corn silage harvest started last week for bags and bunkers. Many will start harvesting for upright silos this week.

Corn yield checks have shown projected yields from less than 10 bushels per acre to over 150 bushels per acre due to hot and dry weather during pollination. Majority of soybean fields have leaves turning color.

RACINE-L.F.: The last shower has made fourth crop hay look to be in real good condition.

WASHINGTON-R.B.: Some farmers are still doing third crop hay. A few farmers are going to cut fourth crop hay next week. A lot of corn is being chopped. Moisture for corn is 60 to 75 percent and quantity is down. Soybeans are all turning color, except the top pods are not. Seeing a lot of corn borers.

Wisconsin Crop Weather

Compiled by the Wisconsin Agricultural Statistics Service

September 9, 2002

Vol. 02, No. 23

Rain and Warm Temperatures

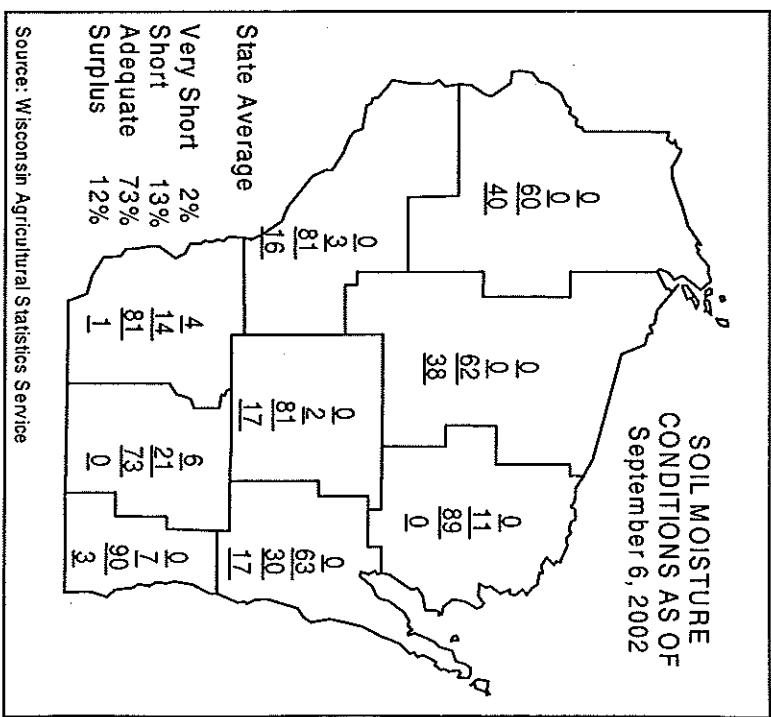

Rain was common across the state for the past week. These included some heavy rains in the northern and middle sections of the state. There were reports of 8-10 inches locally in Chippewa County. Most areas of the north received 3-5 inches of rain, which halted most hay operations. Corn silage harvest was in full swing in the south and beginning everywhere in the state. The unseasonably warm temperatures helped the late-planted crops to catch up after the cool spring. Temperatures ranged from 3 to 9 degrees warmer than average.

There were 5.2 days suitable for fieldwork in Wisconsin last week. The soil moisture was estimated at 2 percent very short, 13 percent short, 73 percent adequate, and 12 percent surplus. Topsoil moisture was raised across the state, with excess now reported in some areas.

The soybean crop showed signs of maturing rapidly over the past week. Leaves turned color over all parts of the state. The percentage of soybeans reported with leaves turning color advanced to 54 percent statewide, compared to 15 percent last week. A reporter in Waupaca County reported that soybeans are the best looking crop in years. Soybeans in Columbia County and across southern Wisconsin were beginning to drop leaves and show signs of ripening. Corn has been helped by the unusually warm temperatures. Prime corn silage maturity may pass quickly if the warm weather continues. Corn silage harvest is in full swing where farmers are able to drive in fields. Moisture levels for bunker silos and bagging of silage were good in the south. Upright silos will not be far behind. Corn borers may be a problem across the state, with reports of lodging becoming more common. Corn husks turned brown and samples in Dane County showed short ears and blank kernels where corn was stressed during pollination. Corn in dent stage was reported to be at 56 percent statewide, compared to 39 percent last week and 51 percent for the 5-year average.

Hay harvest was slowed significantly in the northern areas of the state due to heavy rains. Quality and quantity of both third and fourth crops were described as good. The added moisture from last week's storms have allowed for new seeding to be planted in many areas.

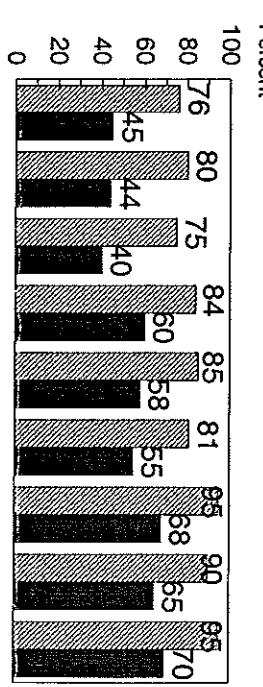

Tobacco harvest neared completion in Dane County last week. Apple harvesting was progressing across the state. Quality in Bayfield County was very good, while Dane County reported a short crop. Potato harvest was begun in some areas of the state. Sweet corn and vegetables for farmers markets are slowing down, with fall and late produce showing up.

Wisconsin Crop Conditions as of September 6, 2002

Item	Percent					
	Very poor	Poor	Fair	Good	Excellent	Percent
Pasture	3	10	25	52	10	10
Corn	5	12	23	42	18	18
Soybean	4	8	23	46	19	19
